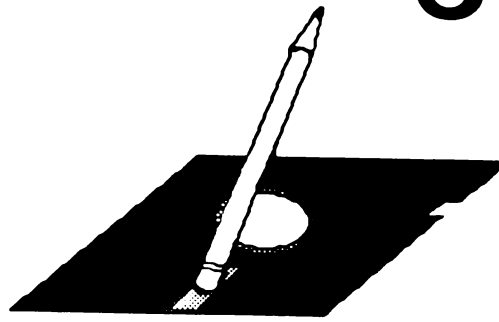
TEJA SOFT

PRESENTS...

THE ERADICATOR MINI-PAK™ 3



LET THE ERADICATOR ERASE YOUR PROTECTION PROBLEMS AWAY!

TEJAS SOFT
206 W. Denison
Robinson, TX 76706
(817) 662-4945

The **ERADICATOR** contains the following programs: The PARAMETER PROCESSOR, a FULL DISK TWO DRIVE COPIER, an easy-to-use LABELING PROGRAM, and a complete DOS WEDGE.

To make an unprotected backup of your software, you should use the following method.

1) Disconnect all peripherals from your computer except for the monitor and one disk drive.

2) Place the **ERADICATOR** with the label side up into the disk drive..

3) Type LOAD ":*" , 8 ,1 and press RETURN.

4) When the MAIN MENU screen appears, press the F1 key to select the copy program.

5) If you are using two disk drives, use the function keys to change SOURCE and DESTINATION numbers. To change device number of your second drive by software method press the F5 key. When done, press the RETURN key. The copying process takes awhile. We have sacrificed speed for reliability. If you have another full disk copier you may use that one instead. Make a backup copy of the original where your original is SOURCE and your blank disk is DESTINATION. After the copy process is complete, press the RETURN key.

6) Use the cursor up/down key to scroll through the parameter listing at normal speed and use the cursor right/left key to scroll through the list at fast speed. When the parameter that you wish to execute is highlighted, press the RETURN key. To re-execute the parameter, press the left arrow key (located at the top left of the keyboard).

ADDITIONAL FEATURES

A LABEL PROGRAM has been provided for you to make labels for your archival backups. To load this program, reset your computer and type LOAD "label program",8 and press the RETURN key. When READY appears, type RUN and press the RETURN key. A catalog feature has been included for those who catalog their diskettes by number. If you do not wish to use this function simply press RETURN.

A DOS WEDGE has been provided to enable you to perform easy DOS Commands. This is done by entering the commands as you would after a PRINT#15 statement.

EXAMPLES:

N0:Diskname, ID	(Format Disk)
S0: Filename	(Scratch File)
R0:NewName=OldName	(Rename File)
V	(Validate a Disk)
I	(Initialize a Disk)

A DIRECTORY ROUTINE has also been provided on this disk. To obtain a directory of a disk simply place it in the drive and press the D key from the main parameter selection menu. To abort a directory, press the back arrow key (located at the top left of the keyboard.)

OUR POLICY is to PRODUCE PARAMETERS THAT WORK! If you encounter a different protection scheme than our parameter was developed for, let us know. We will develop one that will work , or we will back up your title for you! We think our programmers are the BEST in the business, and we challenge you to see if you don't agree!

TEJAS SOFT IS THE ANSWER TO YOUR ARCHIVAL NEEDS!
